Project Experience

Health App

08.2021 - 06.2022

An application that allows you to organize the schedule of doctors, make an appointment with patients, keep a medical history, and so on.

Responsibilities: Build reusable code and libraries for future use. Increased application's performance by conducting code refactoring and optimization of the existing modules. Participated in daily meetings, analyzed user stories, identified and resolved gaps in user stories/business requirements. Assisted in writing technical approaches and created technical documentation in line with client's requirements. Redesigned and refactored the

source code to provide a better scalability, maintainability and code readability. Created and executed unit test cases and contributed to test automation.

Posgresql, Ruby on Rails, GraphQL, Redis, RabbitMQ, JSON, CoffeeScript

FinTech product

06.2020 - 05.2021

Mobile banking for individual and corporate clients. A versatile platform with an application where you can make payments for different services, transfer funds, take and pay loans, manage your banking accounts and all documentation, set up and see the payment schedule, add payment cards.

Responsibilities: Release management, design DB architecture and features. Feature implementation. Writing test cases. Bug fixing. Infrastructure changes and tuning. Support and Livefixes.

Posgresql, Ruby on Rails, Redis, RabbitMQ, External API integration.

Lifestyle and Fitness app

11.2019 – 03.2020

First innovative muslim friendly fitness application for women, an application with programs and individual trainings with meditation and nutrition that allows you to train at home without visiting gyms

Responsibilities: Developed end-to-end solution/a number of new user-friendly features using Ruby. Designed and implemented REST APIs and data processing pipelines for mobile, web and 3rd party integrations. Increased application's performance by conducting code refactoring and optimization of the existing modules.

Ruby on Rails, Postman, PostgreSQL, JSON, Firebase, OAuth 2.0, REST API, JavaScript, Sentry

Education CRM

09.2019 – 12.2019

A custom CRM that allows you to plan, assign and track different education activities within a company for its employees, build different kinds of reports and show different statistics using charts. The SaaS application integrated customer infrastructure and customer services that provides information about employees.

Responsibilities: Assisted in writing technical approach and created technical documentation in line with client's requirements. Participated in daily meetings, analyzed user stories, identified and resolved gaps in user stories/business requirements. Support and bug fixing. Analyzed and recommended changes to existing code, frameworks, and applications.

Postman, Ruby, RoR, JavaScript, jQuery, Redis, PostgreSQL, REST API
