

General

Name	Stanislaw
Education	BSU
Profession	Frontend Developer

Objective

Summary	With 5 years of experience in commercial frontend development of web applications, I am eager to embrace new challenges and complexities, particularly in the realm of artificial intelligence. My expertise encompasses frontend development using JavaScript and TypeScript, along with proficiency in frameworks such as Angular and React.js. I have hands-on experience working with AI tools like ChatGPT, Copilot, and Tabnine, which have enhanced my coding efficiency and problem-solving capabilities. My motivation drives me to tackle challenging projects and initiatives, and I thrive in both independent and collaborative environments, consistently delivering high-quality results. My strong communication skills enable me to interact effectively with coworkers and clients, fostering successful teamwork. I am committed to continuous learning and self-development, always striving for improvement, which positions me as a valuable asset in the field of frontend development, especially in projects that leverage AI technologies.

Projects

Project 1	
Starts	05-2024
Ends	Till now
Description	Platform for analyzing the securities market. The application processes information from major market indices such as Sp500, DowJones, Nasdaq. The platform allows the user to make a decision about concluding a transaction at the best moment, thanks to the use of artificial intelligence. It also provides charts of changes in the value of securities. Collects and provides users with the opinions of financial analysts, talks about news in the US market.
Stack	Typescript, Angular, Angular Material, Ngx Mask, ScrollTo, Charts Trading view Charting Library, d3.js, Node.js, Ng2 libraries, RxJS, Cody/OpenAI, Gemini Syncfusion Angular UI Component,Canvas
Role	Frontend developer
Achievements	• Creation of a functional classroom on the platform; • Developing the possibility of using Excel tables on the platform; • Developing of a video management platform; • Integration of artificial intelligence for securities analysis; • Bug fixing; • Adaptive and responsive layout; • Move to Angular 17.

Project 2	
Starts	06-2024
Ends	12-2024
Description	The app is an online casino with a wide range of Las Vegas style slot machines. For fans of gambling and gambling entertainment. Offers over 200 slots of different themes, daily bonuses, races with other players and the ability to chat with friends within the app.
Stack	Angular, Angular Material, NgRx, CSS, Nx, RxAngular, Ionic, Capacitor, Git, Tailwind CSS.
Role	Frontend Developer

Achievements	• Payment module development involves creating a software component that allows users to make payments; • Updating legacy software components to improve performance, security, readability and maintainability; • Code refactoring; • Bug fixing at web and mobile app; • Customizing language switching, which allowed users to choose their preferred language;
--------------	--

Project 3	
Starts	10-2023
Ends	05-2024
Description	Mobile application for building optimal routes in the mountains. The app allows tourists to create hiking or biking routes with various parameters. The development of the mobile application was carried out using Angular, Ionic, and Capacitor. I was directly involved in the development of the mobile application and its delivery to the App Store
Stack	Typescript, Angular, Ionic, Capacitor, XCode, Android Studio, RxJS, Stripe
Role	Frontend Developer
Achievements	• User interface development • Integration payment system (Stripe) • Integration OpenStreetMap • Building the application within the Apple ecosystem and delivering it to the App Store

Project 4	
Starts	09-2022
Ends	09-2023
Description	An e-commerce platform that offers customers multiple payment options, including financing and installments, to purchase a wide range of goods and services. The platform's web application allows customers to easily buy products online by providing sophisticated

	filtering options based on various criteria, the ability to choose their preferred ordering and delivery methods, and a simple checkout process. The platform guides customers through all the necessary steps to finalize the order. In addition, the platform is integrated with CMS and payment services for seamless and secure transactions.
Stack	Angular, Spartacus, TypeScript, Bootstrap, chart.js, RxJS, Stripe.js, OAuth2, Jenkins, Jira, Swagger, Chrome DevTools, Google Maps API, SwiperJS.
Role	Frontend Developer
Achievements	● Integrating core features and extending them into custom code that resides in an Angular application; ● Participated in the architectural design process with solution architects; ● Worked on routing between components of the application; ● Participated in the creation of checkout process, user cart, user account page, product detail page; ● Implemented UI according to Figma with high fidelity and API connectivity; ● Integrated stripe.js API; ● Developed overused Angular components.

Project 5	
Starts	06-2021
Ends	08-2022
Description	The HR service provided to companies is a multifaceted system that includes various desktop and mobile applications, including those designed for headhunters and freelancers. The comprehensive system allows headhunters to create jobs and communicate with potential freelancers, while freelancers can create their resumes, add psychological test results, search for suitable jobs and communicate with clients. Moreover, a set of mobile apps have been developed using the best and best recommendations for Android and IOS platforms.
Stack	Angular, Ionic, TypeScript, Capacitor, Cordova, RxJS, NgRx, chart.js, auth0, twillio/conversation, HTML 5, SCSS, Swagger, Agile/Scrum, Azure, Android Studio, Xcode, Google Maps API.
Role	Frontend Developer
Achievements	● Applied the latest and most useful Angular approaches and tools to ensure the best application performance, updated Angular;

	• Created registration process, user profile page, offered jobs, integrated twillio conversation; • Implemented capacitor plugins, migrated from cordova to capacitor; • Participated in daily client side PM meetings to ensure agile approach; • Integrated Google Maps API; • Bug fixes and maintenance.
--	---

Project 6	
Starts	10-2020
Ends	05-2021
Description	The project involves the development of several web portals, united by the common idea of genomic medicine, providing excellent advanced genetic testing services for IVF. These are several web applications integrated with each other, each serving different types of users such as patients, clinics, scientists, medical staff and laboratorians.
Stack	Angular, TypeScript, Angular Material, Bootstrap, Jest, Redux, React Router DOM, Jira
Role	Frontend Developer
Achievements	• Developed powerful reusable components that can be used in all user interfaces; • Integrated APIs of external services; • Participated in daily meetings, analyzed user stories, identified and addressed gaps in user stories/business requirements; • Implemented logging functionality to track application failures; • Refactored the application and optimized performance; • Reviewed requests for fixes, maintained high code quality standards, and verified the migration strategy adopted.
