@yrozhenko

I'm purposeful and responsible QA engineer with over 3 years as work experience including Java coding and test automation. I have experience in:

- working with specifications, creating test-cases and the test implementation based on it;
- bug-reporting, logger implementation and test-run results analyzing (weekly report creation based on it);
- project maintenance, existing code refactoring and single project supervising. I have an experience in a pair-programming also.

Key Skills

Programming language: Java

Testing sphere: REST API, GraphQL, Web UI, SQL.

Test tools: Postman, Proxyman, DevTools, Jira, Confluence, TestRail, Selenium, Zebrunner, Maven.

Frameworks/ Libraries: TestNG, REST Assured, Slf4j/Log4j, Carina.

Other: IntelliJ Idea, HTML, JSON, XML, XPath, CSS.

CI/CD: Jenkins, GitLab CI

VCMS: Git/GitHub

Test types: Functional testing, Smoke, Regression, Integration.

English: B1

Professional Experience

Education

- IT-Academy Minsk, Belarus May 2020 – Feb 2021 Java programming course:
I got the Java Core knowledge.
- Epam Automation QA course Apr 2021 – June 2021:
I learnt the fundamentals of Automated testing using Java.
- SolvdLab Test automation course July 2021 – Oct 2021:
I got Advanced skills of Automated testing. I had the practices with REST API, Selenium, MySQL. I learnt how to use different test patterns and test libraries.

Solvd Inc.

November 2021 – Aug 2024

E-commerce project (NDA): order status management system (API).

Responsibilities:

- Requirements analysis and clarification.
- Communication with the customer and different dev/qa teams
- Test implementation
- Existing tests maintaining
- Test log analysis
- Bug reporting/tracking
- Test results reporting

November 2021 – July 2022

E-commerce project (NDA): loyalty management system (UI/API).

Responsibilities:

- Communication different dev/qa teams
- Existing tests maintaining
- Test log monitoring
- Bug reporting/tracking
- Test results reporting

July 2022 – Aug 2024

E-commerce project (NDA): multiple API calls aggregator (API, Salesforce).

Responsibilities:

- Requirements analysis and clarification.
- Communication with the customer and different dev/qa teams
- Planning of test activities
- Design test cases for automation. Creation of test validation list based on specifications.
- Test implementation
- Test log analysis, bug reporting/tracking
- Test results reporting
- Test service building and integration to another test project
- Existing test maintenance and test project refactoring

June 2024 – Aug 2024

E-commerce project (NDA): inventory data transferring between DB and SF (API, Salesforce).

Responsibilities:

- Requirements analysis and clarification.
- Build proof of concept for automation with demo for customer group
- Communication with the customer and assigned dev/qa team
- Planning of test activities

- Design test cases for automation. Creation of test validation list based on specifications.
- Test implementation
- Test log analysis
- Test results reporting

Aug 2024 – November 2024

Insurance/ Fintech (NDA): the tool for instant identification, valuation and settlement of claims (API, UI).

Responsibilities:

- Requirements analysis and clarification
- Test plan creation
- Design test cases. Creation of test validation list based on specifications
- Testing toolchain integration with demonstration to the customer
- Planning of test activities
- Communication with the customer and assigned dev/devops team
- Test implementation
- Test log analysis
- Test results reporting

Technical skills	Work experience (years)	Level	The last usage
